Okay, you've installed the PlayBook OS 2 beta. You've rooted your PlayBook. Now it's time to set up the Android Market on your PlayBook. Why? While it's certainly great that PlayBook OS 2 allows you to run repackaged Android apps converted to the RIM .BAR format, it's much better to install them as if you were using a regular old Android device through the Market. It's also much easier and makes for a wider selection of Android apps available on the PlayBook. Update: This guide only works with BlackBerry PlayBooks running OS 2.0 beta. If you are using a newer version of the operating system, it is currently not possible to jailbreak your device and the steps below will not work. Update 2: It is unlikely that dingleberry will be updated to support PlayBook OS 2.0 or later software anytime soon. The Dingleberry website now redirects to the jailbreak.me blog. If you haven't already rooted your PlayBook and installed the PlayBook OS 2 beta, do so now before trying to install Market. Skipping these two steps will get you nowhere. You will also need a SCP client such as WinSCP (use the first link marked "installation package") and PuTTYgen. Download and install them on your computer before following these steps. The instructions below assume that you are using a Windows PC as at the moment the only way to root the PlayBook is to use a Windows PC. It should be noted that you will need a PlayBook running OS 2 beta for this, as Dingleberry cannot yet be hacked on the final BlackBerry PlayBook OS 2.0. Download the current Google Apps package. Extract the contents of the ZIP file (you'll need it later). Download the Android launcher packaged as a .bar file from PlayBook Bars and install it using the DDPb installer (mentioned in the PlayBook OS 2 manual). (Just choose any of the apps from the launcher) called Android Launcher, Launcher orlauncher). 4. Tap the launcher to initialize Android Player on your PlayBook (it should appear at the bottom of the PlayBook home screen). 5. Run PuTTYgen on your computer, click the download button and navigate to the Dingleberry folder. 6. Change the Files of type drop-down menu to All Files and double-click the RSA file to select it. 6. Click OK when you see the PuTTYgen notification above, then click Save Private Key. Give the file an easy-to-remember name (e.g. playbook.psk) and save it. Using a scp client (e.g. WinSCP for Windows) login as root in your manual. Use your PlayBook's IP address as the hostname and root as the username. Under the private key file, press the i button and locate the playbooksk file you just saved in PuTTYgen. When the WinSCP file manager opens, your computer will appear on the left and the PlayBook on the right. In the left pane, navigate to the folder where you extracted the CyanogenMod Google Apps. Copy the META-INF and System folders to the PlayBook root (the System folder will be merged with the existing System folder on your PlayBook). In the right pane, go to /system/app/ and delete SetupWizard.apk. Now click on the folder icon with the up arrow (again in the right pane). Again in the right pane go to /apps/sys.android.XXXX.n/native/scripts[enter]. XXXX is different for each PlayBook and is a LONG number. After changing directory, click on the black box icon labeled HOM to open a command prompt in WinSCP. Type ./android-player-cmd.sh kill -android-core.sh [enter] to kill the current Android Player process on the PlayBook. in the right corner of the main home screen). Tap Android Market (or another Google app) and enter your Google account information. If Google checks in, you're done! If not, repeat yoursNote that not all apps downloaded from the Market will work. While the PlayBook can run Android apps, some of the apps you want to install might depend on libraries or frameworks that RIM doesn't include (like the Google Maps platform, which is missing and disrupting apps like Current). Also note that Android apps still don't have access to the PlayBook's cameras, although that could certainly change when PlayBook OS 2 is released in February a small commission).But there are a number of ways you can support the site directly, even if you use an ad blocker* and hate shopping online.Contribute to our Patreon campaign or...Contribute PayPal at * If you're using an ad blocker like uBlock Origin and you're seeing the pop-up message at the bottom of your screen, we have a guide that can help you turn it off.
