New York (RealMoney) - Dennet decades ago, Japan attracted the frenetic admiration of the world. Professor of Harvard Ezra Vogel has penus "Japan as number one: lessons for America". Japanese investors were buying resources u.s.s. Trophy like New York Rockefeller Center. Tokyo was one of the large shopping centers in the world, along with Wall Street, and the value of the Earth under the Imperial Palace of Japan in Tokyo was worth more than all of California. I wasn't even in Japan, I talked about a word of Japanese. Yet one of my Japanese professors of Harvard offered me a job at him Legale Studio in Tokyo, coming out of the law school, like a face of Gaijin to his American customers. I don't think he did it today. Twenty years later, the image could hardly be more different. Far from becoming the global "number one", the economy of Japan has been overcome by China as the second economy of the world. Instead of offering a model to the world, the decline of Japan from economic premenence is destined to reflect that of Argentina in the 20th century. The March earthquake and the Fukushima nuclear accident only confirms that the gods are not smiling in Japan. Twenty years ago, do not have Japanese stocks was a threatening career move. Today is the opposite. A Merrill Lynch survey found that 29% of fund managers around the world was overweight Japan. And can you blame them? Despite an occasional explosion of optimism, more than two decades after the Japanese bear is still with us. After excluding in 1989 with the outbreak of the largest real estate bubble in economic history, the large market of the Japanese bear now lasted twice as long as any other secular bear market on record. If the opposite of love is not hatred, but indifference, then you would be hard to find a resource class that U.S. investors are most indifferent to by Small-size scrolls. Since the collapse of Nikkei in 1989, trading volumes in small Japanese caps have all but evaporated. Investment Banks and Brokerages produce further research. And what little research is rarely translated into English. What remains of the market is dominated by domestic Japanese investors. While foreign investors still dominate trading on the Tokyo Stock Exchange, individual Japanese investors dominate the small cap sector, they account for 60% to 80% of trading on Jasdaq, the Japanese version of NASDAQ. However, with any objective measure, you would be difficult to find a better deal in any stock market developed than the small Japanese plugs. Hundreds of small Japanese caps meet Ben Graham's criteria for cheap "cigarette". Today Japan has up to 200 listed companies trading under cash on books. This means you can buy these companies for free. Investors may never have seen such low evaluations in the history of a developed economy. Fortunately, you can enter the action through the Dividend ETF (DFJ) of Wisdomtree Japan - Get Wisdomtree Japan SmallCap Compact, which also boasts some incredibly low ratings. Since June 30, 2010, the companies of this ETF have been valued at a mere 0.36x sales price and 0.87x. As a comparison, the NASDAQ titles exchanged approximately 3.4 times the book value on the same date. The objection of Warren Buffett for Graham's "cigarette" approach to investing was that you end up with a sled of crappy companies. I think that the dividend of Wisdomtree Japan SmallCap (DFJ) meets this objection. The paying dividend companies in this ETF are, by definition, cash generators. Companies on the point of going out of business do not pay dividends. However, despite the convincing investment case, I bet you won't invest in small Japanese caps. Did you buy commodities in 1998 and gold in 2002? Neither do I. Instead, instead, He fell in love with Russia and CMGI (remember them?) And I lost the shirt in both. Meanwhile, gold is almost 500% since the British Chancellor Gordon Brown sold half of the Golden Reserves of the Bank of England between 1999 and 2002. Today you can buy gold in a vending machine at Dubai airport. But I don't want to commit that error again. Written by Nicholas Vardy, Chief of Investments, Global Guru Capital; Bull Market Alert Editor and The Alpha Investor Literal Publication moment, the author owned DFJ personally and for customers. Based on the second half of the masterpieces of World Literature Edx Mocc, this brief course of literature examines how writers reach over national and linguistic borders such as Mondani readers and travelers, and how their modern fiction increases the status of world literature. These masterpieces of Modern at world literature take part in a tradition of weaving small stories in ambitious projects. The course extends to medieval stories and extends to contemporary novels. Throughout the course, you will learn how these writers use their fiction to engage directly in the political and social concerns of their present and globalized modernity, by rejectioning exploration, migration, international conflict and cultural exchange.
