Gameboy Advance is a perfect tool for gaming and gaming is currently one of the most popular pastimes in the entire world, and it has been incredibly popular for many decades now. The gaming industry is one of the most competitive and lucrative industries in the entire world, and when you consider just how many different games consoles and manufacturers currently in the field, it's easy to understand why that is. One company however, that many believe is synonymous with the gaming industry itself, is Nintendo, who have released some truly amazing consoles over the years. One particular games console that revolutionized the way we played games at the time, was the Gameboy, which was a handheld gaming device released back in the late 80s that became insanely popular, in fact, that nearly three decades later, we are still playing with Gameboys and are enjoying them more than ever. The Game boy advance is the latest incarnation of the Gameboy, and if you're looking to take your gaming outdoors and on the go, this is the device for you. A brief history of the Gameboy advance, sometimes simply abbreviated to GBA, is a handheld gaming 32bit device. Developed by Nintendo, the GBA is the Gameboy color's successor. Released mainly worldwide back in 2001, the GBA has currently sold around 100 million units all over the globe. Despite the fact that it was succeeded by the Nintendo DS, the GBA still remains a firm favorite amongst keen gaming enthusiasts. Back in 1996 there were rumors of a 32-bit handheld gaming device, which at the time was unheard of. Just to give you an idea, the Sega Mega Drive was only 16 bit, and the Sony PlayStation 1 itself was 32 bit. It wasn't launched until 2001 as mentioned, but when it was, it took the gaming world by storm. Rather than the standard Gameboy design, which required users to hold the machine vertically, this device was held horizontally, allowing for a larger display screen, and making it easier to hold and control. The device featured a full color TFT LCD display screen that featured a crystal clear display. It wasn't however, these issues were addressed back in 2003, as the Gameboy advance SP was born, which featured a fold down screen, as well as a front lit display, so playing games in dark conditions was now popular. The device featured a rechargeable battery which was in-built, and a very attractive design in the process.
