## Coulomb's Law Worksheet

Name: \_\_\_\_\_  
Date: \_\_\_\_\_  
Mod: \_\_\_\_\_

Directions: Answer the questions below using coulomb's law. Be sure to use SI units when using the equation. Show all work and circle your final answer.

1. A charged sphere with an excess charge of  $+5.5\text{mC}$  is placed 0.15m from another charged sphere, which carries a charge of  $-9.1\mu\text{C}$ .
  - a. What is the magnitude of the electrical force between the two charged spheres?
  - b. Is this a repulsive or attractive force?
  - c. How many excess electrons are on the negative sphere?
  - d. How many electrons has the positive sphere lost?
2. An electron and a proton are 0.1 mm apart. What is the magnitude of the force? Is the force repulsive or attractive?

3. Two objects are at rest on a table when they are given a charge. The one object has a charge of  $+7.8\mu\text{C}$  and the other has a charge of  $-0.54\text{mC}$ . The magnitude of the force between the two objects is 17.5N. What is the distance between the two objects?

## Pre AP Physics Electrostatics Review Sheet

1. A negative charge of  $-6.2 \times 10^{-6}\text{ C}$  exerts an attractive force of 160 N on a second charge 0.200 m away. What is the magnitude of the second charge? [ $+3.00 \times 10^{-7}\text{ C}$ ]
2. Two charges,  $q_1$  and  $q_2$ , are separated by a distance,  $d$ , and exert a force,  $F$ , on each other. What new force will arise if:
  - a.  $q_1$  is doubled? [six]
  - b.  $q_1$  and  $q_2$  are not in line? [six]
  - c.  $d$  is squared? [one]
  - d.  $d$  is cut in half? [one]
  - e.  $q_1$  is tripled and  $q_2$  is doubled? [eleven]
3. Two electrons, each with a charge of  $-1.6 \times 10^{-19}\text{ C}$ , are separated by  $1.5 \times 10^{-10}\text{ m}$ , the typical size of an atom. What is the electric force between them? [ $1.624 \times 10^{-20}\text{ N}$ , repulsive]
4. A positive and negative charge, each of magnitude  $1.8 \times 10^{-19}\text{ C}$ , are separated by a distance of 10 nm. Calculate the force on the particles. [36 N, attractive]
5. Two negative charges of  $-3.0 \times 10^{-19}\text{ C}$  exert a repulsive force of  $2.8 \times 10^{-10}\text{ N}$  on each other. Calculate the distance that separates them. [0.291 m]
6. Three charges lie along the x-axis. One positive charge,  $q_1 = 11.5 \mu\text{C}$ , is at the origin, and another positive charge,  $q_2 = 8.8 \mu\text{C}$ , is at  $x = 1.00\text{ m}$ . At what point on the x-axis must a negative charge,  $q_3$ , be placed so that the resultant force on it is zero? [ $1.87\text{ m}$  from  $q_1$ ]
7. A positive charge of  $9.8 \times 10^{-19}\text{ C}$  is separated from a second positive charge of  $2.2 \times 10^{-19}\text{ C}$  by 60 cm. Calculate the electric force between the two particles. [1.702 N, repulsive]
8. A charge,  $q_1 = 7.40 \mu\text{C}$ , is at the origin, and a second charge,  $q_2 = -3.26 \mu\text{C}$ , is on the x-axis 0.950 m from the origin. Find the electric field at a point on the y-axis 0.600 m from the origin. [ $1.57 \times 10^7\text{ N/C}$  at  $60.3^\circ$ ]
9. An object, A, with  $+2.3 \times 10^{-19}\text{ C}$  charge, has three other stationary charges nearby. Object B,  $-4.1 \times 10^{-19}\text{ C}$ , is 0.080 m to the right. Object C,  $+6.1 \times 10^{-19}\text{ C}$ , is 0.12 m to the left. What is the net force on A? [18.888 N at  $23.47^\circ$ ]
10. Two negative charges of  $-11.0 \mu\text{C}$  are separated by 0.750 m. What force exists between the charges? [0.007 N]
11. A charge of  $+3.48 \times 10^{-19}\text{ C}$  is placed at the origin, and another charge of  $+5.8 \times 10^{-19}\text{ C}$  is placed at an  $2.5\text{ m}$ . Find the point between these two charges where a charge of  $+3.00 \times 10^{-19}\text{ C}$  should be placed so that the net electric force on it is zero. [ $1.812\text{ m}$  from  $q_1$ ]
12. How far apart are two electrons, each with a charge of  $-1.6 \times 10^{-19}\text{ C}$ , if they exert a repulsive force of  $2.00 \times 10^{-10}\text{ N}$  on each other? [ $1.18 \times 10^{-10}\text{ m}$ ]
13. A force of  $6.8 \times 10^{-10}\text{ N}$  exists between a positive charge of  $7.80 \times 10^{-19}\text{ C}$  and a negative charge of  $-2.67 \times 10^{-19}\text{ C}$ . What distance separates the charges? [ $0.558\text{ m}$ ]
14. Two identical point charges are separated by a distance of  $7.0\text{ cm}$ , and they repel each other with a force of  $1.10 \times 10^{-5}\text{ N}$ . What is the new force if the distance between the point charges is tripled? [ $1.233 \times 10^{-6}\text{ N}$ ]
15. Two point charges are separated by  $120\text{ cm}$ . If one charge is  $+14.2 \mu\text{C}$  and the other is  $-11.8 \mu\text{C}$ , what is the force between them? [ $1.628\text{ N}$ , attractive]
16. A charge of  $3.71 \times 10^{-19}\text{ C}$  is attracted by a second charge with a force of  $489\text{ N}$  when the separation is  $22.0\text{ cm}$ . Calculate the size of the second charge. [ $8.740 \times 10^{-19}\text{ C}$ ]
17. A charge  $q_1$  of  $-6.24 \times 10^{-19}\text{ C}$  and a charge  $q_2$  of  $-2.78 \times 10^{-19}\text{ C}$  are separated by a distance of  $120.0\text{ cm}$ . Find the equilibrium position for a third charge of  $+11.0 \times 10^{-19}\text{ C}$ . [ $0.726\text{ m}$  from  $q_2$ ]

NAME: \_\_\_\_\_ DATE: \_\_\_\_\_

**UNIT 3** 

**Newton's Second Law**

Newton's second law expresses the relationship between the net force on an object and the object's acceleration:  

$$\text{Net Force} = \text{mass} \times \text{acceleration}$$
  

$$F_{net} = ma$$

Use Newton's second law to solve the following problems.

1. A 1550 kg car accelerates at a rate of  $1.50 \text{ m/s}^2$ . What is the net force on the car?

2. A 4.40 kg car is coasting at a constant top speed as it comes into a turn. The top speed is  $20.0\text{ m/s}$ . The car then turns at  $-2.57 \text{ m/s}^2$  and it comes to rest at the turn. What is the net force acting on the car as it slows down?

3. A catcher in a professional baseball game, with a mass of  $-45\text{ kg}$  sits in the seat. The ball, with a mass of  $0.15\text{ kg}$ , is thrown at the catcher. If the ball's momentum is  $0.15\text{ kg}\cdot\text{m/s}$ , what is the ball's momentum as it is being caught?

4. A 21.6 kg boat is sailing in the ocean. The force of gravity due to the weight of the boat,  $W$ , is  $-45\text{ N}$  down onto the ball. If the boat has a mass of  $0.15\text{ kg}$ , what is the boat's acceleration as it is being caught?

5. A catcher in a professional baseball game, with a mass of  $-45\text{ kg}$  sits in the seat. The ball, with a mass of  $0.15\text{ kg}$ , is thrown at the catcher. If the ball's momentum is  $0.15\text{ kg}\cdot\text{m/s}$ , what is the ball's momentum as it is being caught?

6. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the force of the water,  $F$ , that acts on the book?

7. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

8. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

9. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

10. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

11. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

12. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

13. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

14. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

15. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

16. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

17. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

18. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

19. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

20. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

21. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

22. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

23. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

24. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

25. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

26. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

27. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

28. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

29. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

30. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

31. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

32. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

33. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

34. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

35. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

36. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

37. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

38. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

39. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

40. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

41. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

42. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

43. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

44. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

45. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

46. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

47. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

48. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

49. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

50. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

51. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

52. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

53. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

54. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

55. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

56. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

57. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

58. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

59. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

60. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

61. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

62. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

63. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

64. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

65. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

66. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

67. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

68. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

69. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

70. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

71. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

72. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

73. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

74. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

75. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

76. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

77. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

78. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

79. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

80. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

81. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

82. A book is resting on a horizontal surface. The force of gravity due to the weight of the book,  $W$ , is  $-33.0\text{ N}$ . What is the normal force of the book?

83

### Coulomb's Law Step

1. Given the fundamental representation of Coulomb's Law,  $F = k \frac{q_1 q_2}{r^2}$ , where  $k = 9.0 \times 10^9 \text{ N} \cdot \text{m}^2/\text{C}^2$ , describe or provide an analogy among electric force & charge, and gravitational force & mass.

2. By how much does the electric force between a pair of charged bodies decrease if both charges are decreased by one-half?

$$F_1 = \frac{k}{r^2}, F_2 = \frac{k}{(2r)^2} = \frac{k}{4r^2}, F_3 = \frac{k}{(3r)^2} = \frac{k}{9r^2}, F_4 = \frac{k}{(4r)^2} = \frac{k}{16r^2}$$

Electric force is proportional to the product of the charges.

The force is  $\frac{1}{4}$  times as great.

3. The mass of a proton is approximately  $1.67 \times 10^{-27} \text{ kg}$ . The mass of an electron is approximately  $9.11 \times 10^{-31} \text{ kg}$ .

- a) Use Newton's law of gravitation to calculate the gravitational force between the proton and electron with following values:

$$F = G \frac{m_1 m_2}{r^2}, F = \frac{6.67 \times 10^{-11} \text{ N} \cdot \text{m}^2/\text{kg}^2 \times (1.67 \times 10^{-27} \text{ kg}) \times (9.11 \times 10^{-31} \text{ kg})}{(1.5 \times 10^{-15} \text{ m})^2}$$

- b) If  $r = 10^{-15} \text{ m}$ , the gravitational force of charge is determined by the mass of particles rather than separation.

$$F = \frac{6.67 \times 10^{-11} \text{ N} \cdot \text{m}^2/\text{kg}^2 \times (1.67 \times 10^{-27} \text{ kg}) \times (9.11 \times 10^{-31} \text{ kg})}{(10^{-15} \text{ m})^2}$$

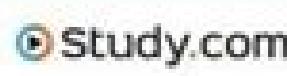

- c) How many additional protons would be needed to increase the mass of the proton to twice its current value? (One proton has a gravitational force of  $10^{-30} \text{ N}$ )

$$F = G \frac{m_1 m_2}{r^2}$$

By multiplying current by 2, we know larger total gravitational force is dependent on mass.

Electric Force Worksheet

### Quiz & Worksheet - Coulomb's Law

<http://study.com/academy/practice-quiz-worksheet-coulomb-s-law.html>

1. Increasing the charge on one particle by a factor of 2 while leaving all other factors the same will:

- cause the force to increase by a factor of 4  
 cause the force to decrease by a factor of 2  
 cause the force to decrease by a factor of 4  
 cause the force to remain the same  
 cause the force to increase by a factor of 2

2. Increasing the distance between particles by a factor of 2 while leaving all other factors the same will:

- cause the force to increase by a factor of 2  
 cause the force to remain the same  
 cause the force to decrease by a factor of 4  
 cause the force to decrease by a factor of 2  
 cause the force to increase by a factor of 4

3. Decreasing the charge on both particles by a factor of 2 while leaving all other factors the same will:

- cause the force to decrease by a factor of 4  
 cause the force to decrease by a factor of 2  
 cause the force to increase by a factor of 2  
 cause the force to remain the same

Most lab summaries consist of 2 pages total, with space for students to provide the following information:Lab investigation purposeData for the independent and dependent variableWritten statement on data trendsSketch of a graphicaSubjects:Types:Also included in: Second Semester Bundle09 - Electric Charge & Force PhET Simulationsby Fully editable, NGSS/modeling pedagogy aligned inquiry lab summaries! Most lab summaries consist of 2 pages total, with space for students to provide the following information:Lab investigation purposeData for the independent and dependent variableWritten statement on data trendsSketch of a graphicaSubjects:Types:Also included in: Second Semester Bundle09 - Conceptual Physics PhET Simulationsby Fully editable, NGSS/modeling pedagogy aligned inquiry lab summaries! Most lab summaries consist of 2 pages total, with space for students to provide the following information:Lab investigation purposeData for the independent and dependent variableWritten statement on data trendsSketch of a graphicaSubjects:Types:Also included in: Second Semester Bundle09 - Coulomb's Law by Fully editable, NGSS/modeling pedagogy aligned inquiry lab summaries! Most lab summaries consist of 2 pages total, with space for students to provide the following information:Lab investigation purposeData for the independent and dependent variableWritten statement on data trendsSketch of a graphicaSubjects:Types:Also included in: Second Semester Bundle09 - Electrostatics Unit Testby Fully editable, NGSS/modeling pedagogy aligned test! Tests consist of 4 pages total, with two pages worth of multiple choice questions and two pages worth of free response questions. Maxwell's Equations. If it is missing something you'd like to see, please reach out and I will try to add it! Answer key is included.The following concepts are covered in this review:types of dataexperimental designSI/me09 - Electrostatics Writing Assignmentby Fully editable, NGSS/modeling pedagogy aligned short writing assignment! These short writing assignments are usually one page long and include 3-4 short answer prompts that require students to explain and demonstrate their mastery of different learning targets covered in each unit. ISBN 978-981-02-4471-2 Partial Word Bank includes: attraction, battery, Ben Franklin, Coulomb's Constant, Coulomb's Law, conduction, electrostatics, elementary charge, electroscope, friction, glass, induction, insulator ....etc (25 words) in all directionsPage 2This 38 term worksheet will help your students to learn about electricity: atomic structure, electrical quantities, and Ohm's Law. Hoboken, NJ, ISBN 978-0-313-33358-3Huray, Paul G. p. At the time, the nature of electricity and magnetism was not understood, so the underlying principle behind magnetic attraction/repulsion versus the attraction between an amber rod and fur was thought to be the same. Ancient people were aware certain objects could attract or repel each other. Coulomb's law is a physical law stating the force between two charges is proportional to the amount of charge on both charges and inversely proportional to the square of the distance between them. I provide a full page and half page option for students to fill in as the video plays. Dr. Shini Somara is your host. Intermediate Electromagnetic Theory. The law is also known as Coulomb's inverse square law. The scalar form of Coulomb's law is:  $F = kQ_1 Q_2 / r^2$  or  $F = Q_1 Q_2 / r^2$ wherek = Coulomb's constant ( $9.0 \times 10^9 \text{ N} \cdot \text{m}^2 \cdot \text{C}^{-2}$ ) F = force between the chargesQ1 and Q2 = amount of charge = distance between the two charges A vector form of the equation is also available, which may be used to indicate both the magnitude and direction of the force between the two charges. World Scientific. Quizzes are used for students to demonstrate proficiency of learning targets outlined in the corresponding curriculum guideSubjects:Types:Also included in: Second Semester Bundle09 - Electrostatics Quiz 2by Fully editable, NGSS/modeling pedagogy aligned quiz! There is a mix of free-response and multiple-choice questions for most quizzes, which are usually one or two pages long. It may be used to derive Gauss's law. Wiley, ISBN 0470542764 Stewart, Joseph (2001). There are three requirements which must be met in order to use Coulomb's law: The charges must be stationary with respect to each other.The charges must be non-overlapping.The charges must be either point charges or else otherwise spherically symmetrical in shape. Worksheets are used for students to deploy models developed from inquiry labs and as a way to practice problem-solving en route to maSubjects:Types:Also included in: Second Semester BundleElectrostatics Worksheetsby Fully editable, NGSS/modeling pedagogy aligned worksheets! There are a variety of free response questions for most worksheets, which are usually one or two pages long. The force is attractive if the charges attract each other (have opposite signs) or repulsive if the charges have like signs. Worksheets are used for students to deploy models developed from inquiry labs and as a way to practice problem-solving en route to maSubjects:Types:Also included in: Second Semester Bundle09 - Electrostatics WS 2 (Electrostatic Forces)by Fully editable, NGSS/modeling pedagogy aligned worksheet! There are a variety of free response questions for most worksheets, which are usually one or two pages long. Worksheets are used for students to deploy models developed from inquiry labs and as a way to practice problem-solving en route to maSubjects:Types:Also included in: Second Semester Bundle09 - Electrostatics WS 1 (Charge)by Fully editable, NGSS/modeling pedagogy aligned worksheet! There are a variety of free response questions for most worksheets, which are usually one or two pages long. The formula for Coulomb's law is used to express the force through which stationary charged particles attract or repel one another. Scientists in the 18th century suspected the force of the attraction or repulsion diminished based on the distance between two objects. Tests are used for students to demonstrate mastery of learning targets outlined in the corresponding curriculum guideSubjects:Types:Also included in: Second Semester Bundle09 - Electrostatics Unit Reviewby Fully editable, NGSS/modeling pedagogy aligned unit review! Unit reviews are 2 pages long and usually consist of a mix of conceptual short answer questions, multiple-choice questions, and free-response calculation questions. Terms include: coulomb, joule, direct current, alternating current, electron orbit, impedance, repulsion, and other relevant terms.Ideal for a Career and Technical ElecPage 3Chemistry First Semester Reviewby This semester review is EDITABLE and includes the1. The concepts I test my students over first semester. Unit reviews are used for students to assess their current mastery of learnSubjects:Types:Also included in: Second Semester BundlePage 4Crash Course in Physics 26 Electric Fieldsby Crash Course in Physics is a fast moving, informative, entertaining video series that tackles many issues that come up in high school AP physics classes. Students are given the opportunity to open the flood gates of creativity while they utilize the knowledge they have gained during your life science unit on living things & biology. Students are challenged wifTypes:showing 73-86 results Many of the questions are moSubjects:Types:Crash Course in Physics 25 Electric Chargeby Crash Course in Physics is a fast moving, informative, entertaining video series that tackles many issues that come up in high school AP physics classes. Greenwood Press. Coulomb's law was published by French physicist Charles-Augustin de Coulomb in 1785. Electricity and Magnetism: A Historical Perspective. pp. 50. There is a rubricSubjects:Types:Also included in: Second Semester Bundle09 - Electrostatics WS 3 (Electric Fields)by Fully editable, NGSS/modeling pedagogy aligned worksheet! There are a variety of free response questions for most worksheets, which are usually one or two pages long. Worksheets are used for students to deploy models developed from inquiry labs and as a way to practice problem-solving en route to maSubjects:Types:Also included in: Second Semester Bundle09 - Electrostatics Quiz 1by Fully editable, NGSS/modeling pedagogy aligned quiz! There is a mix of free-response and multiple-choice questions for most quizzes, which are usually one or two pages long. 7-8.
