How to change time on android tablet

Riddle me this, dear reader: If you've got a device that looks like a tablet, acts like a tablet, and runs Android apps, what do you call it?Odds are, your gut answer is "an Android tablet" — right? (Either that, or "a parsnip." But seriously, if that's what you thought, seek immediate counseling.)What I'm actually describing, as you may guessed, is a convertible Chromebook. But for all practical purposes at this point, it essentially is an Android tablet. And all signs suggest it — not the traditional Android-based slate — is the future of the large-screened "Android" experience. There's an argument to be made, in fact, that you should never buy a traditional Android tablet again. And crazy as it may sound, that seems to be precisely what Google wants.I swear I'm not off my rocker. (Okay, maybe just a little. I mean, if we're being completely honest, I did come up with that parsnip thing a minute ago.) The truth is that there's a lot going on here, and as someone interested in technology — or even just someone who occasionally enjoys caressing it — it's well worth your while to consider: If it looks like a duck and quacks like a duck...Let's start with the practical side of things. Take a minute and ponder this: What does a traditional Android tablet do that a convertible Chromebook doesn't?No matter how long you mull, it's tough to come up with much. Nowadays, a Chromebook runs the same apps from the same Google Play Store. It has an increasingly similar user interface, with a new touch-friendly and Android-reminiscent app launcher rolling out as we speak. JRT's likely to have an Android-like way of getting around the system before long, too, not to mention native integration of the Google Assistant (which is launching with the newly announced Google Pixelbook and then presumably spreading to other devices from there).It's the best of both worldsBut on top of all of that, a Chromebook offers meaningful advantages a traditional Android tablet simply can't match. It operates within the fast-booting, inherently secure, and free from manufacturer- or carrier-meddling Chrome OS environment. The operating system is updated every two to three weeks, directly by Google, for a minimum of five years. That's a sharp contrast to the software realities we see on Android — and if you think the updates on Android phones are bad, let me tell you: The situation with Android tablets is worse. Samsung's Galaxy Tab S2, for instance — arguably the highest-profile flagship Android tablet up til this year's Tab S3 follow-up — received the Android 6.0 update 253 days after the software's release. The subsequent Android 7.0 update took a whopping 292 days to reach the tablet. It'd be a shock if the device were to get Android 8.0 at all, given the typical best-case-scenario two-year update window for most Android devices. (And don't even ask about monthly security patches.)Hold the phone, though: Important as those factors are, there's more to this story yet — and obvious as it may seem, this final point is worth emphasizing: In addition to the regular selection of Android apps, a Chromebook also gives you a desktop-caliber browser experience along with a laptop-level keyboard and capable trackpad. (And, as a side perk, that means you've got a built-in multi-mode stand for your tablet, too.)It's the best of both worlds, as I've put it before — a whole new kind of platform-defying, all-purpose productivity and entertainment machine. And while it won't immediately lead to the outright extinction of traditional Android tablets, it certainly makes them seem like a waterred-down and obsolete version of the same basic experience.The Chromebook-to-Android-tablet transitionMake no mistake about it: The Chromebook's nearly-fleshed-out role as the new Android tablet is no sudden shift. Google has been quietly converging its two platforms for years — in what now seems like some level of preparation for the transition we're seeing today. From early efforts to bring Android apps onto Chrome OS to the ongoing alignment of design elements and features between the platforms, the writing has been on the walls for quite a while. Heck, way back in 2013, a dashingy handsome prophet pointed out the seeds of the then-nascent but rarely identified effort starting to take shape: The question everyone always asks is whether Google will somehow "merge" Android and Chrome OS into a single product at some point down the line — but that question may be missing the mark. While anything's certainly possible, it appears the current strategy is to make the two platforms more consistent and connected and to use Android's strengths to bolster Chrome OS's capabilities. With a little help from its robot-themed friend, Chrome OS can evolve from a strictly web-centric desktop OS into an all-purpose computing solution that delivers the best of both worlds. Yuuup.In more recent years, Google's own treatment of the two platforms speaks volumes. The company hasn't put much emphasis on Android in a tablet form since 2015's Pixel C release — and that product felt half-hearted at best, with reports suggesting it was never actually even meant to run Android. Prior to that, Google had annual (and sometimes even twice-annual) tablet launches and a steady push for tablet development. Since the Pixel C's launch, the notion of the Android tablet has felt like a barely remembered afterthought.Instead, Google's resources have focused more and more on refining Chrome OS's touch experience while also optimizing the performance of Android apps on Chromebook devices. Evidence suggests a Chrome OS emulator is now in the works for the Android Software Development Kit, which could make it meaningfully easier for Android app developers to confirm their programs work properly on the platform. And then, of course, there's the Pixelbook — which, combined with the ongoing radio silence on the traditional tablet front, is a pretty plain indicator of Google's intentions. Google has leapfrogged its old form and created a superior alternativeAnd you know what? Moving the Android tablet experience onto the Chromebook actually makes perfect sense. Tablet sales in general have mostly been slumping for a while now, and Android tablets have always struggled to gain any meaningful traction in the market. Chromebook sales, meanwhile, are skyrocketing — with a renewed push in 2017 for the enterprise — which gives Google a built-in and ever-expanding audience for its reframed tablet ecosystem.With convertible Chromebooks now running the gamut from simpler \$250 to \$300 systems all the way up to Google's own \$999+ top-of-the-line machine, the only real question — one Google has no doubt carefully considered — is why you'd possibly want a traditional Android tablet when you could have a system that runs all the same apps in a more versatile, secure, and productivity-friendly environment.Google has effectively leapfrogged its own old form and created a superior alternative — and, in doing so, addressed Android's biggest pain points by seizing total control of the software and user experience. (Wait, why does that sound familiar? Oh...right. Mnhmm.) And now, the company's ultimate goal seems clearer and closer than ever.Mark my words: Chromebooks are the future. Traditional tablets are the past. And no matter how you look at it, that's a very good thing — both for Google and for us as users. Copyright © 2017 IDG Communications, Inc. While Android tablets remain useful but secondary to the iPad market, smaller big-value tablets thrive among kids. Parents who want to give children a tablet are usually looking for a product that's fun to use, affordable, rugged, and features strong parental controls. The good news is that there are many Android tablets for kids with all of these features and more. Here are some of the best! Best Android tablets for kids: Editor's note: We'll be updating this list as more Android tablets for kids are released in the future, or current product lines are refreshed. 1. Amazon Fire 7 Kids Pro tabletAmazon recently refreshed the \$99.99 kids version of its Fire 7 tablet, and now it boasts a Pro moniker. You get a faster quad-core processor, more storage, a better camera setup, and improved battery life. The Fire 7 Kids Pro includes a rubber "kid-proof" case in blue, Doodle, or Intergalactic.Parents can set up four individual profiles for their children. The tablet has parental controls that can block access to videos and games until their kids reach specific educational goals. They can also set up bedtime curfews, along with ways to block access to social media and in-app purchases. Just know the Fire 7 Kids Pro is the lowest end of the spec range and has the lowest quality display compared to the Fire 8 and Fire 10. But it's a great price to get started. Read also: The best cheap Android tablets in 2021Purchasing this Android tablet for kids comes with a pretty big perk: a free year of Amazon Kids Plus, with access to over 20,000 books, movies, TV shows, educational apps, and games for kids aged six and up. The web browser in the tablet offers a curated and appropriate list of over 56,000 websites, videos, and YouTube videos. Finally, the tablet has a two-year hardware guarantee — if it breaks for any reason, Amazon will replace it for free. Amazon Fire 7 Kids Pro specs: Display: 7-inch, HD SoC: 1.3Ghz quad-core RAM: 1GB Storage: 16GB Rear camera: 2MP Front camera: 2MP Battery: up to 7 hours Software: Fire OS 2. Amazon Fire HD 8 Kids Pro tabletAmazon just refreshed its Amazon Fire HD 8 Kids Pro, and it's looking like a great deal. It is now \$139.99, or an additional \$40 compared to the 7-inch model, but that extra money will get a larger 8-inch, higher-resolution display, a much faster chip, double the RAM, double the storage, and a lot more battery life at 12 hours. It now boasts USB-C charging, which will be a bonus for families updating to the latest spec and don't want to keep their old cables forever and ever.It also has dual stereo speakers with Dolby Atmos support and a new adjustable stand in blue, Doodle, or Intergalactic. The 8-inch version also has the same two-year guarantee, the free year of Amazon Kids Plus, the parental controls, and all other features found on the 7-inch model. Amazon Fire HD 8 Kids Pro specs: Display: 8-inch, HD SoC: 2.0Ghz quad-core RAM: 2GB Storage: 32GB Rear camera: 2MP Front camera: 2MP Battery: up to 12 hours Software: Fire OS 3. Amazon Fire HD 10 Kids ProFinally, you have the top-of-the-line model of Amazon's kid-friendly tablets with the Amazon Fire HD 10 Kids Pro. Continuing the upward trend, the Fire HD 10 ups the screen size and resolution once again and packs a much faster processor and more RAM, plus USB-C charging and dual speakers.You still get the same "kid-proof" cases found on the Amazon Fire 7 Kids Pro and Fire HD 8 Kids Pro, along with the two-year guarantee, a free year of Amazon Kids Plus, the parental controls, and other features found on the smaller devices. You can typically buy the largest of Amazon's kid tablets for \$199.99, but be sure to be on the lookout for Amazon's frequent discounts. Amazon Fire HD 10 Kids Pro specs: Display: 10.1-inch, Full HD SoC: 2.0 Ghz octa-core RAM: 3GB Storage: 32GB Rear camera: 5MP Front camera: 2MP Battery: up to 12 hours Software: Fire OS 4. Dragon Touch Y88x Pro Kids TabletThe Dragon Touch Y88x Pro Kids tablet is one of the newer Android tablets for kids around. Specifications are in line with what you'd expect from a budget tablet built for kids. What's important here are the kid-friendly features that are available with the device.These include the premium version of the Kidzo app, which provides educational videos, apps, and games for kids to enjoy, plus impressive granular-level parental control. A high-quality silicone bumper case ensures that the tablet is safe from damage and also comes with a kickstand to prop up the device when watching videos. Dragon Touch Y88x Kids Tablet: Display: 7-inch, HD SoC: 1.5Ghz quad-core RAM: 2GB Storage: 16GB Rear camera: 2MP Front camera: 2MP Battery: 2,800mAh Software: Android 9.0 Pie 5. TCL Tab Family EditionVerizon's Tab Family Edition is an exclusive device from TCL, and it's built for the entire family. It packs a vibrant eight-inch display and 32GB of storage that you can boost up to 256GB.What differentiates it from its TCL counterparts is its durable construction. The Tab Family Edition comes wrapped in a durable and brightly-colored bumper case, and the display is made of Dragontrail glass. Better yet, the case features a built-in kickstand so you or your little ones can stream shows hands-free.Rounding out the spec sheet, you'll find a solid 5,500mAh battery and two total cameras. You're looking at an 8MP lens on the back while a 5MP selfie shooter completes the front. The TCL Family Edition is even future-proof, thanks to Android 10 right out of the box. TCL Tab Family Edition specs: Display: 8-inch, FHD SoC: Snapdragon 665 RAM: 3GB Storage: 32GB Rear camera: 8MP Front camera: 5MP Battery: 5,500mAh Software: Android 10 6. Leapfrog LeapPad UltimateThe LeapPad Ultimate tablet comes from Leapfrog, a company that has been releasing educational kids' toys for years. This is an updated version of the classic LeapPad but comes with a re-designed silicone bumper.Designed for kids ages three to nine, this tablet includes Just-for-Me learning technology, a service built into most games that analyzes your kids' learning abilities. If a subscription isn't for you, there are more than 1,000 other apps, games, and videos you can tap into. The LeapPad Ultimate also offers LeapSearch, a kid-friendly and curated web browser. Leapfrog LeapPad Ultimate specs: Display: 7-inch, HD SoC: 1.0Ghz quad-core RAM: N/A Storage: 8GB Rear camera: 2MP Front camera: 2MP Battery: 5+ hours Software: Brio OS 7. Leapfrog LeapPad Academy Kids TabletThis is yet another Android tablet for kids from Leapfrog. The LeapPad Academy is designed for children ages 3-8. It shares a few features and specifications with the Leapfrog Epic and is basically another entry-level tablet.The LeapPad Academy comes with over \$150 worth of content, including top-selling apps to help develop core school skills, social skills, routines, problem-solving, and creativity. Parents can also set up access to a safe web browser that restricts their websites to their chosen list. Leapfrog LeapPad Academy specs: Display: 7-inch, HD SoC: 1.3Ghz quad-core RAM: N/A Storage: 16GB Rear camera: 2MP Front camera: 2MP Battery: 7 hours Software: Android 8. Samsung Galaxy Tab Active 2 Rugged TabletWhile the Samsung Galaxy Tab Active 2 Rugged Tablet is not exactly made for kids, it has the main features you need to trust a child with an expensive device. This thing is built tough, featuring MIL-STD-810 certification, which means it can handle excessive pressure, temperature, vibrations, and drops. Also, Samsung has certified it as an IP68 tablet, keeping it safe from water and dust. It may not have all the kid-focused features on the label, but it is more likely to survive your kid's torture tests than any other device here that uses a silicone case. Plus, you can always add your own apps for kids or toddlers to set the tablet upright.And, when your kid goes to bed, you can wipe it down and use it for work, play, or browsing, because it's at least capable of real tasks too! Samsung Galaxy Tab Active 2 Rugged Tablet: Display: 8-inch, HD SoC: Samsung Exynos 7870 RAM: 3GB Storage: 16/32GB Rear camera: 8MP Front camera: 5MP Battery: 4,450mAh Software: Android 7.1 Nougat One of these Android tablets for kids is sure to make your child happy. We'll add more options to the list once they launch. The BestAmazon Fire tablet, Kids, Tablets
