Integration Specialist

## info@qwikresume.com | LinkedIn Profile | Qwikresume.com

Researched, presented, and deployed an Application Lifecycle Management Solution consisting of Scrum and eXtreme Programming. Always ready to represent the establishment with a friendly, professional demeanor at all times.

## EXPERIENCE

## Integration Specialist

## ABC Corporation - FEBRUARY 2009 - AUGUST 2009

- Maintained Large Business Infrastructures.
- Managed 50+ computer, 5+ server networks for Condominiums and Resorts.
- Maintained Resort Data Processing Software for Condominiums and Resorts.
- Maintained multiple sites network environments and managed all pcs. in person and remotely as suited per incident or need.
- Installed New T1 service at more than 5 businesses.
- Deployed and Managed network monitoring, remote administration, and Antivirus software at all sites.
- Maintained relationships with all customers and established new relationships with new customers.

## Integration Specialist Delta Corporation - 2004 - 2009

- Providing various levels of support to our customer & amp; using Oracle PL/SQL to troubleshoot issues Learning to deploy interfaces Drafting enhancement/.
- Member of 5 person Research & amp; Development team to identify product deficiencies which resulted in production of 1000 units with zero defects - .
- Providing Gifted and Talented educational experiences to identified students in 3rd-5th grades; working closely with teachers to integrate extended.
- Main Duties Seat configuration for 777 3D/2D design, assembly and installation drawings.
- Packaging floor electric cable routing, raceways and track covers for proper configuration.
- Acquisitions of small business call centers and answering services across the country Integrated newly acquired companies systems to Maps Mobiles in-.
- Customer Integration o EDI Mapping.

Application Programming Interface(APIs) have transformed the modern digital age into a cohesive set of interlinked technologies. Benefit of APIs, it is save both time and energy. Examples of APIs are Facebook, Pinterest, Twitter and Dropbox.

# Application programming interface (api). Application programming interface (api) definition. Application programming interface example. Application programming interface example. Application programming interface adalah. Application programming interface in java. Application programming interface example. Application programming interface upsc.

Types of apiã, conceptually an API is one thing, as we saw. The APP interprets these data and presents the information you have requested in a legacular way. Every day a summary of the world's leading tech for you! Through APIs, applications can communicate with each other without knowledge or intervention of users. You choose a city and the departure date, another city and the date of return and the class in which you will travel, among other variables. Application Programming Interface, or Application Programming Interface, or Application Programming Interface (Application Programming Interface) is a very common term in day to day of an analysis professional systems. But in terms of software development and API can be constructed of vas forms. Developers from a main program create a specific API and provide other creators, which develop plugins to increase the potential and functionalities of the program. The kitchen is the part of  $\hat{a} \in \infty$ System  $\hat{a} \in \infty$ Syste prats when we deal with apiã â € â € œHe, but a specific may be the main: be careful when publishing an API, because if part of your wool is exposed in the public. In the present times rarely if you see systems that work â € œSozinhosà ¢ â € â € œWhen we are very much in the centralized computation (mainframe), but Not even in the OS / 390 per year there is a lot of assembly, COBOL etc. program. It is all of this, it is well documented to and version control. To book your flight, you interaciate with the company's website to access her database, check out places available on these dates and the cost of the ticket. Just like the options in the restaurant cardboard, you can choose from several cities, starting dates and return and more. Maybe you're familiar with the search process for online flights. Webapià ¢ â € a € œ E can be client-side or server-side (executed on the front or back-end of a Web application). Recently, APIs' use has spread to the plugins, which complement the functionality of a particular program. The API is the interface to whom the online travel service calls for the company's database information to book the seat, select the options Luggage etc. It is designed to be consumed by a specific pit (for example, mobile developers), all of being documented and having its control of versions performed in order to give predictability af Å s maintenance and life cycle needs. A © M of being monitored and managed with performance and scale in mind any other software product, the modern API has its Practice Software Development Life Cycle (SDLC) for Design, Testing, Development, Version Management and Control fâ £ o. When a user runs a program that involves some process of the operating system, it is well proven that Windows makes a connection between the software and some of their APIs that run automated. which are repository of functions that end up playing the role of apià ¢ â € œ s. API is a set of routines and programming patterns for access to a software or web-based platform. Plugins: Currently one of the most commonly used modes in Web 2.0 maturity function. In simpler Web applications, currently, I venture to affirm that 50 percent of the cAfA Aµl of the plans © consumed of various plugins. The GaAfa§o (the API) is the messenger who registers his request and informs  $\tilde{A}f\tilde{A}$  Kitchen (the system) what to do. I do not like this definition, as the Web is a small piece of Internet, which has much more than the gr $\tilde{A}f\tilde{A}$  ° C as we see; Maybe internet API would be better  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories: DLL  $\tilde{A}$  ¢  $\hat{a} \in \hat{\alpha} S$  Abra $\tilde{A}sacces!$  Related posts via the most commonly used categories is the most commonly used categ Library: Executives resulting from classes or sets of classes compiled in environments such as. NET EÃ, DELPHI, for example. This, I love apiã â € ¢ â € â € a € a € companies that make money with APIs. The concept of  $\hat{a} \in \hat{c}$  concept of  $\hat{a} \in \hat{c}$  connectivity interface Genà  $\hat{c}$  at this Marketplace of APIs. A modern API,  $\hat{a} \in \hat{c}$  was defined as any type of connectivity interface Genà  $\hat{c}$  rich to an application. In this context we speak of Web services (whether Webservices, soap, WCF with SOAP, REST, JSON, TCP etc., .NET Webapi and the like). More recently, however, the modern API assumed some features that make it extraordinarily valuable and  $\tilde{a} \in f\hat{a} \in f\hat{a}$ new channel on YouTube, the CanalTech News. Basically, this is a resource  $\hat{a} \in \hat{c}$  The inside the border of the application to access you via programming, then  $\hat{A}f\hat{a} \notin f\hat{a} \notin f\hat{a$ original CÃfÂ<sup>3</sup>digo, many other sites and applications use the Google Maps data by adapting it in order to use this service. What is API and what does not £ o, abstracting the details of implementation and often restricting access to these features with specific rules for this. In functions of a misalignment on the concept and to compose the conceptual posts of this blog, I decided to write this brief post. Let's imagine that you are booking a flight on a company's website a lot. Frameworks: When we have a unique framework of a system is not API, because there is no resource exhibition or integration With other systems. Then the server retrieves this data, interprets them, runs the requirements required and sends them back to your phone. This procedure is done by means of an API, where the hotel's website developers use the Google Maps CÃfÂK to enter it at a particular location of your página. Want to stay inside the best Day technology news? If this is something that encapsulates part of the implementation of an application and provides implementation for another application. Use an API. There are some of them that make your cases available and instructions to be used in other sites in the most convenient way to your users. In general, the API is composed of a system of accessory functions only by means of programming. All this process occurs through an API to get lighter, let's look at an example of day to day. Imagine that you are in a restaurant, checking out the card to do request. If we are talking about abstractions / encapsulated cÃf ° C within the same application and with specific interfaces for use, no API, can be Library, framework or something. Incorporated in a DLL, according to the applied visibility rules, they are exposed to all / all functions that can be used by third parties. There are only only the types mentioned, there are other times but I think the mentioned are the most commonly used. The API connects the various functions on a site so that they can be used in other applications. When a person accesses a hotel página, for example, it is possible to view inside the site the map of Google Maps to know the location of the establishment and check the best way to get up. Enter your email in CannelTech to receive daily updates with the world's technology. API ACRÂfÂ'nimo of Application Programming Interface (application program interface), a software intermediate that allows two applications to converse with each other. Even though it is a very common concept in the day-to-day systems analyst, instead or another employee in a way not very adequate: In some cases a lot restrict the concept of API, in others, are too covered. The acronym API refers to the term in English "Application Programming Interface" which means in translation for the Portuguese application program interface. "Instead, they communicate through small packets of data, sharing only what is required  $\hat{a} \in \infty$  What when you make a request for delivery. For your order to arrive at the kitchen and then the dish comes to your table, it is necessary to count on a link of essential connection. In the web world large examples of frameworks that â & œFazem â & œFazem a f œ for your users are jQuery and Bootstrap. You tell the restaurant what you would like to eat, the restaurant says what you need in exchange and, in the end, you receive your meal. The APIs have become valuable that composit much of the revenue of many Negócios. When it is said of SOA A ¢ â € ¢ fFICA and available for an echo-system uses. Each time you use an app like Facebook, send an instant message or check the weather forecast on your mobile, it connects to the Internet and sends data to a server. They work through the communication of several cÃf Âµgs, defining specific behaviors of a particular object in an interface. When hammock, it is usually a framework that takes place a set of apiã â € â € œ5 for consumption. Then it brings the dish (or response to your request) to you. This is an example of API in real life. It acts as the assignment of our previous example. Then the API obtains the response of the company AÃÂ © Rea and delivery to the online travel service, which then shows the most up-to-date and relevant information. The API also offers a layer of data security data from your phone will never be fully exposed to the server and, in the same way, the server is never fully exposed to your phone. Operating systems also have their APIs with the same functions described above. Reuse, centralization and integration An API has three main objectives: 1) enabling rewarding of the respective does not need to be duplicated in the context of the solution, 2) centralize lame (premise for coheses (O) enabling a solution of a solution access to such wiring, 3) enabling integration with other applications when Integration  $\hat{a} \notin \hat{c} \hat{a} \notin \phi$ , demanding access to internal applications resources. What if you are using an online travel service such as Kayak or Expedia, which aggregates information from databases from vas companies AÃf Travel, in this case, interacts with the API of the company AÃf © Rea. When we talk about a WordPress blog, for example (as this use) most resources are a result of plugins consumption (examples are usage to use captcha, email and feed , anti-spam, SEO optimizer, statum analyzer etc.). A API is created when a software company has the intention that other software creators develop products associated with their service. WebApi: Basically, apià &  $a \in a$  wes used in web solutions (something inside the www). www).
